Allowable Subject Matter

1. Claims 15 and 17 are recorded on the previous action filed on 10/18/06 and now claims 1-12, 14, and 16, which have the similar scopes, are in condition for allowance.

2. Claims 1-12, 14-17 are rejected as following:

Claims 1, 5, 9, 14-17 are independent claims.

The following is an examiner's statement of reasons for allowance:

As to claims 1, 5, and 9, the present invention from the application discloses a system for “judging whether or not the user is eligible for the printing service based on affirmation or denial of the authentication information by the collaborating system, wherein the user is capable of accessing the printing service via authentication information associated with the collaborating system”.

As to claims 14 and 16, the present invention from the application discloses a system for “judging whether or not the user is eligible for the printing service based on affirmation or denial of the authentication information by the chosen collaborating system, wherein the user is capable of accessing the printing service via authentication information that is associated with at least one of a plurality of collaborating systems”.

As to claims 15 and 17, the present invention from the application discloses a system for “judging whether or not the user is eligible for the printing service based on affirmation or denial of the authentication information by the appropriate collaborating system, wherein the user is capable of accessing the printing service via authentication information associated with a selected one of the collaborating system from the plurality of collaborating systems”

The closest prior art such as Matsuyama et al. (US Patent No. 6,886,028), Kemp et al. (US Pub. No. 2002/0078160 A1), and Swanson (U.S. Patent No. 2002/0013784 A1), which is recorded on the Examiner's Remark, fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner's Remark

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Matsuyama et al. (US Patent No. 6,886,028) discloses upon receiving from the client an entry made by a user, the WWW server must prepare a WWW page containing the setup procedures that accompany a printing order issued to a corresponding print server (a printer), and must transmit the page to the client. Furthermore, various information, such as the input of a user ID and a password, the selection of a print server to act as an output shop and the selection of a printing medium to receive the Internet printing service, must be exchanged with a client when preparing the printing order.

Kemp et al. (US Pub. No. 2002/0078160 A1) discloses the list of service providers is

displayed by print driver interface on the display of computer. The user can then select one or more of the service providers from the list, whereby print driver interface again activates and displays Remote Printing To Service Providers window with the selected service provider information displayed in box. To confirm the selected service provider, the user selects the OK button in window, whereby Remote Printing To Service Providers properties window is closed and print driver interface again activates and displays window. Upon returning to window after selecting a service provider, if the user selects print button at this time, his print request will be denied by the service provider because the print request does not include the needed billing information, such as the user's name, payment information, delivery type, etc.

Swanson (U.S. Patent No. 2002/0013784 A1) discloses if there is a match in the service provider database for the selected web site, the service provider goes to the web site's url and provides the user's ID, password, and play list ID. The audio files on the identified web site are then transferred to the service provider server and streamed to the elastic buffer of the gateway and then streamed to the headset. Following the transfer of the audio file from the web site to the service provider server, the service provider operates in the normal operation mode discussed in connection.
